There is, however, a long list of things that could have been better. Lightroom was released a few years ago in 2010, and its basic functionality has not changed a great deal since then. While Lightroom 5 has added a few useful and welcome new features, many of the old ones have still not been redesigned or reimagined. I have been repeatedly calling for this for the past few years and in many cases welcomed the feature updates and improvements, but much of what Lightroom does today feels like an unfortunate throwback from a time when web browsers were 5 years old. New features like layers and masks also seem to bear significant resemblance to the old Photoshop, which we know is now being phased out. And while it's easy for me to criticize software for being outdated and a reminder of a time when blog and Facebook were in their infancy, perhaps the important thing here is that this is not a new, unfamiliar version of a tool we are already familiar with. The old one is not competing with anything at the moment, but it now feels quite obviously out of sync with the professional world of the Digital Photography world. A very common complaint I read about Lightroom is that it is too complicated, even overly so. Well, that is definitely true. It's a pretty difficult piece of software, and unless you're a seasoned digital photographer, it may feel like more of a gymnastic feat than a genuinely useful tool. This can't be a problem, really, as Lightroom is a tool for a photographer, after all. The app just wants to make your life easier, while making sure you don't fall into a steep learning curve. I am more than willing to overcome the learning curve. After all, it's about time. If I spend most of my time scratching my head trying to understand new features and being frustrated by bugs, how can I be fully focused on my photography or my web browsing? Lightroom should allow me to work and have fun at the same time, not just clutter my workflow with frustrating complexities.

Photoshop is a powerful application that made significant improvements to the layering system. However, it remains tricky to browse items that are not currently open. With the CS5, this concept is known as the smart object. The smart object will inherit the layer properties of the layer it resides in. This enables a layer to have fill, layer effects, and much more based on its parent layer. EDITOR - The image editor is notable for its extensive library of filters, masks and adjustment layers. Adding adjustment layers, background adjustment and masking, several image editing tools, including filter, clone stamp, and crop, are included. The other brand-new features that are supported in the Photoshop CC 2019 version are the new tools such as Smart Filters and Layer Mask. Till now, the Photoshop CC 2019 has support for Smart Filters, Masking, and Content Aware Fill. **Share for Review (Beta)**: New Photoshop features have been a topic of discussion among users since Adobe rolled out group projects in 2019. Now, with Share for Review, designers can instantly preview changes and collaborate on projects with a single click. Groundbreaking technology from Adobe's new Sensei collaborative AI platform makes this possible. With Share for Review, designers can invite team members or co-workers to review and comment on a design in a browser-based experience. Share for Review will be available to the public next year, allowing organizations to serve their users online seamlessly through any connected device. **Photoshop on the web**: Hundreds of thousands more users have now been able to experience editing and collaboration across the web using Photoshop on mobile devices or desktop browsers. In addition to providing easier collaboration with Adobe Creative Cloud desktop members, Photoshop on the web allows users to enjoy all of Photoshop's 3D rendering power in the world's most popular online media tools across phones, tablets and desktops, with no downloads or installation required. For instance, users can now edit 3D assets natively in Cloudinary, leverage the cloud's brilliant HTTP live streaming capabilities to deliver 2D and 3D asset assets and experiences, and seamlessly incorporate live videos into their design work in Adobe Stock.

The new Imagination Cloud brings to Photoshop the same big data technology that is being applied to the rest of the Adobe Creative Cloud. It allows designers to engage with their data wherever and whenever they have access to a network connection. It also gives Photoshop users the power of a modern machine. What's new this year is the prospective introduction of Classification. When it comes to big data, computers are still not as good as humans, but you can leverage the power of AI to get a leg up on the competition. With Classification, a machine vision system in Photoshop now recognizes categories like sky, blue, color, odd shape, etc., providing a way to make more informed decisions in filters, so you can create images with less tweaking. Another advantage to AI and Classification is that they have global capabilities. Traditionally, adjustments to photographic images have been limited to adjustments for exposure, white balance, color balance, saturation and hue. AI is all-powerful and can instantly make recommendations that are tailored to a global audience. Photoshop 15 now has a lower-resolution photo that detects the best region to crop and a new Context Aware Fill feature that identifies a subject regardless of location or background and automatically fills in the subject's head or background. Additionally, selected regions can be instantly cropped with the new Crop tool. "I'm a huge Photoshop fan and was thrilled with what we were able to accomplish with the new features mentioned above," said David Aronoff, Adobe product marketing lead for Photoshop. "These new innovations will help users share and collaborate more efficiently in the shortest amount of time possible."

The main difference between the modes is the appearance and functionality of the workspace, where there are different tools and controls to work with. The biggest problem with Photoshop as it stands is the way it handles @mentions. If a person has mentioned you in a document, you can use a tool to replace all @mentions with your name. You can also replace @mention with your name in the comment field. Otherwise, you must include the person's name in the comment, which is quite time-consuming and difficult because you need to cut and paste the @mention's name into the comment. Adobe also decided to update its keynote workflow and motion graphics software, Adobe After Effects. Some of the major enhancements include the announcement of macOS High Sierra compatibility and an improved high-performance workflow. While none of these updates broke any of Elements' signature features, big updates are expected in the future. Adobe is focused on Elements for now, as developer features and integration are tied to the program. The program is a huge asset for anyone looking to touch up photos and plenty of professionals on various platforms use it for that task.
