A 5-year-old boy developed swelling of the face and chin after intramuscular injection of dexamethasone sodium phosphate (Decadron). Generalized swelling of the face, tongue and neck occurred a few hours after administration. Inflammatory signs persisted and glucocorticoid therapy was given. However, the symptoms did not disappear. Subsequently, painful swelling of the face and chin developed, which was repeatedly associated with fever, and was present for two weeks. Generalized swelling of the face and tongue appeared at the age of 5 years, as was found in an examination of his mother. Intramuscular injection of dexamethasone sodium phosphate may cause a wide variety of side effects. The drug should be administered by the intravenous route if there are signs of systemic toxicity.¹ Field of the Invention The present invention relates to a semiconductor integrated circuit, particularly, to a phase locked loop (PLL) circuit for use in a clock signal generating circuit that is used for a semiconductor integrated circuit. 2. Description of the Related Art In a recent semiconductor integrated circuit, a PLL circuit is used for
